TerraTeach

Helping students master map work for their geography exams

Map work is where students get stuck

Map questions carry easy marks in geography exams, but students struggled to practise them well.

1

Hard to reach the teacher

In online classes, students couldn't easily show their map to a teacher or ask if it was right.

2

No clear right answer

Atlases and textbooks draw rivers differently, so students never knew exactly what the examiner expects.

3

Practising alone

Students had no way to check their own map, so mistakes only showed up in the exam.

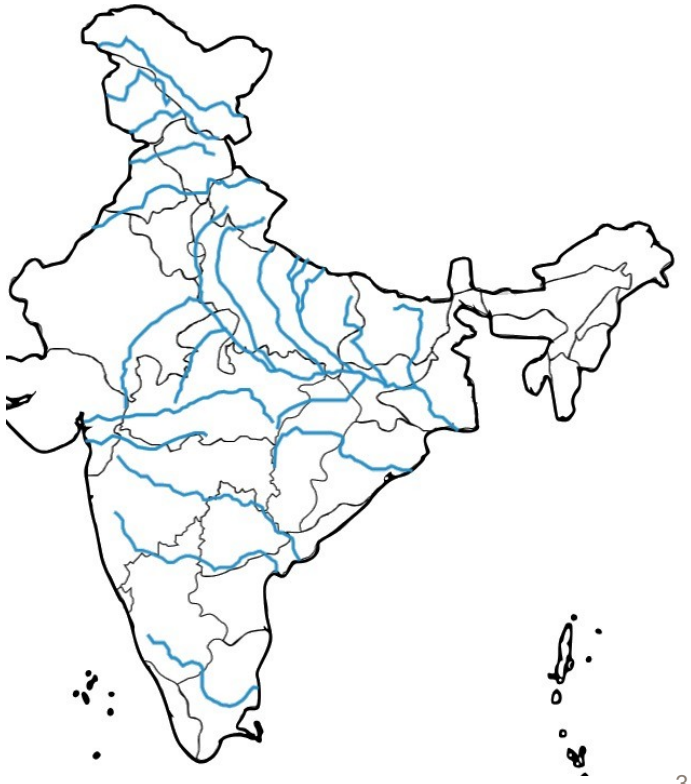

One place to learn, practise and get feedback

TerraTeach turns a blank map of India into a classroom that students can use from home.

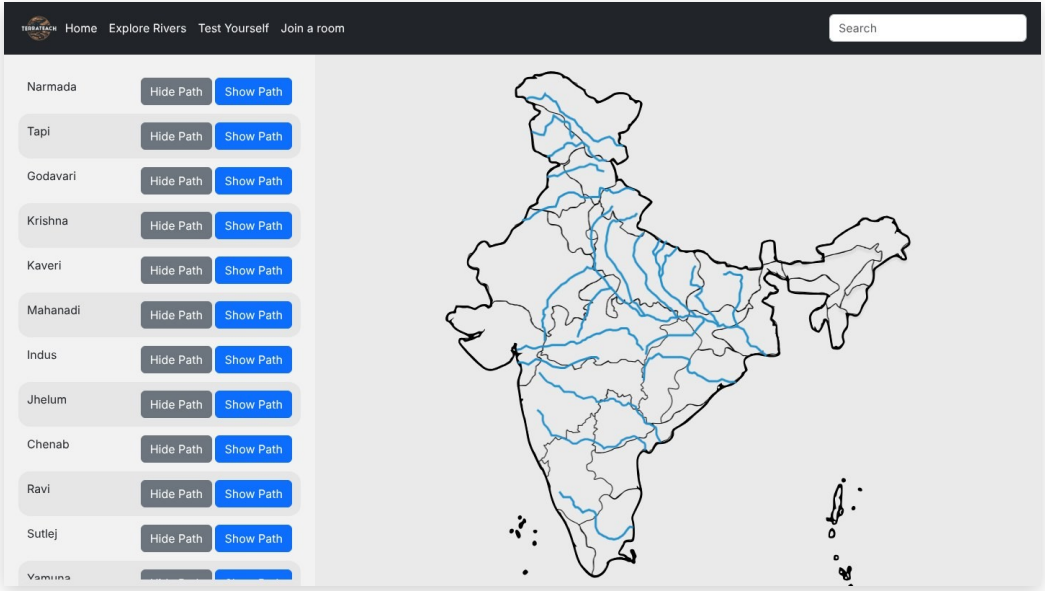

1. **Learn from answer maps**
   Every river is traced exactly as the exam expects it

2. **Practise and check**
   Draw on a blank map, then compare with the right answer

3. **Ask the teacher**
   Send your map in and get feedback, even online

Every river, traced the way the exam expects

20 major rivers, from the Indus to the Kaveri

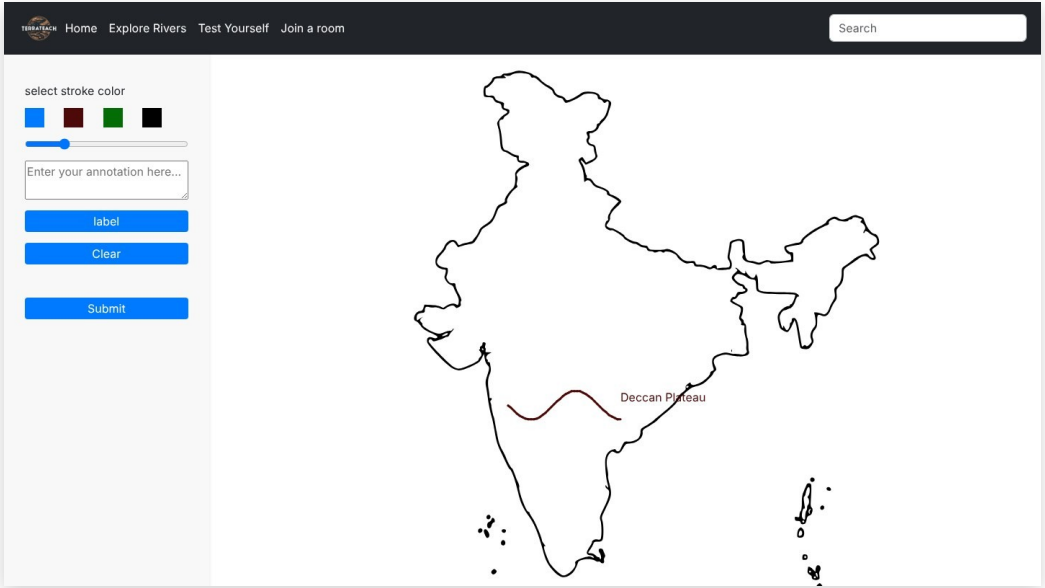

- We carefully traced each river to match the answer students are expected to draw in the exam.
- Show one river at a time, or all of them together.
- Add the state boundaries to see which states each river flows through.

Practise on a blank map, just like the exam

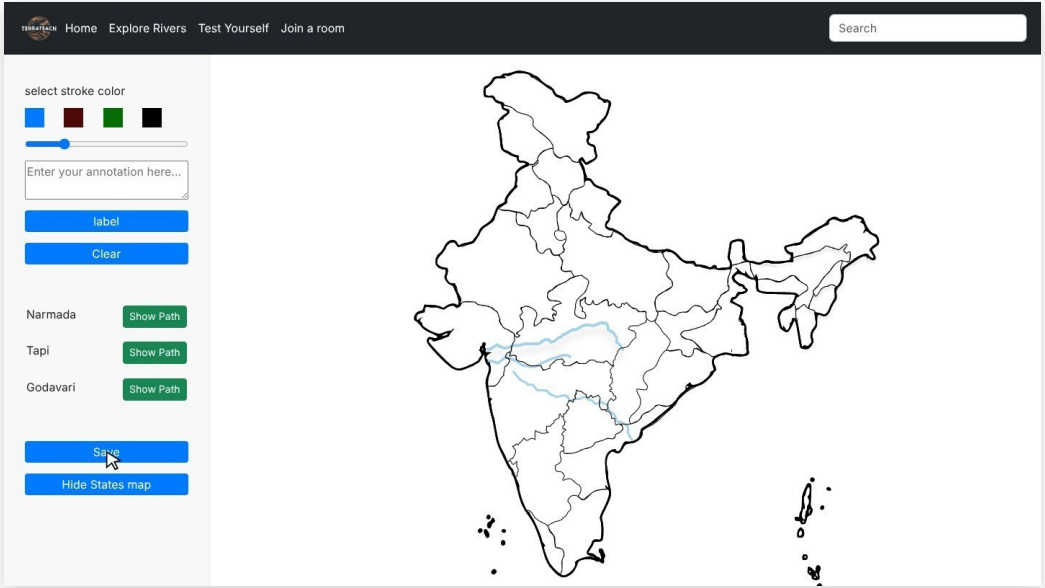

1. **Draw the rivers**
   Pick a colour, such as blue for water, and trace the river onto the map

2. **Name what you draw**
   Add labels, just as the exam asks

3. **Start again any time**
   Clear the map and try once more

Students check their own answer straight away

1. **Follow the guide**
   Faint outlines of the correct river path to trace over

2. **See the states**
   State boundaries show which states each river flows through

3. **Save for revision**
   Keep the finished map to revise before the exam

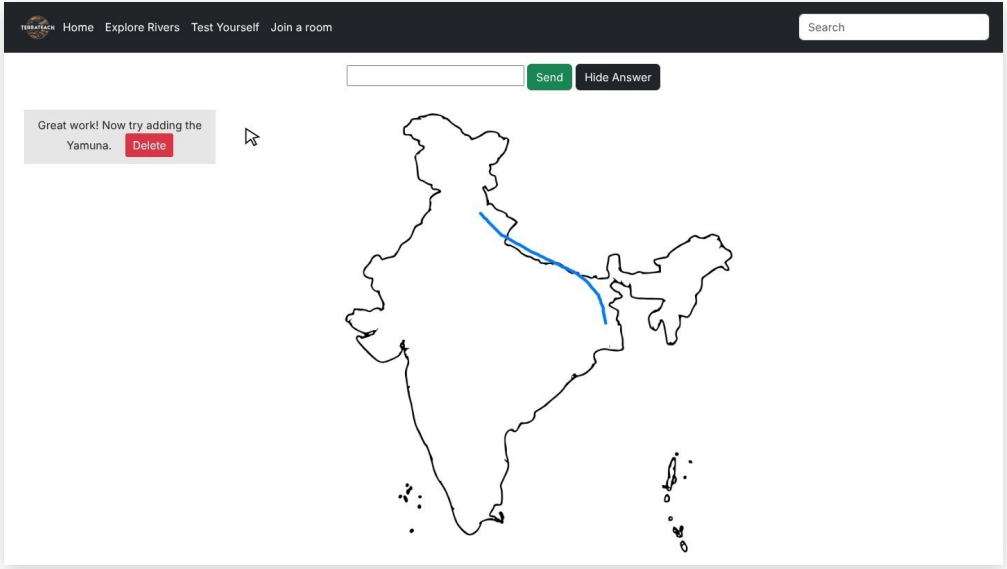

Students and teachers stay connected, even online

1. **Student sends the map**
   One click shares the finished map

2. **Teacher sees it at once**
   No waiting for the next class

3. **Teacher replies**
   Short notes, like “Now add the Yamuna”

4. **Student reads the feedback**
   It appears on their screen within seconds

What the teacher sees: the student's map and the feedback they sent

What changes for students

Before

- Unsure whether their map was right
- Waited for the next class to ask a question
- Learned from maps that differ from the exam

With TerraTeach

- A correct answer map for every river
- Quick feedback from the teacher, even online
- Practice that matches the exam paper

What comes next

Virtual classrooms

A room for each class, so teachers can follow every student

More exam maps

Mountains, soils, states and every river in practice mode

Any device

Use TerraTeach on tablets and phones, not just computers

Progress tracking

Show teachers which maps each student finds hardest
